

About the Authors!

Tyler Rudolph (tylerdeanrudolph@gmail.com) has worked as an intern, assistant park planner, and ecologist for Woodland Caribou Provincial Park and the Red Lake Ministry of Natural Resources. He has served as a park ranger for the Provinces of Ontario, Manitoba, and British Columbia and as a fisheries technician for the Yukon/Transboundary Rivers Division of Fisheries & Oceans Canada. Having completed his B.Sc. in Natural Resources Conservation at the University of British Columbia in 2001, he is now pursuing a M.Sc. at the Université du Québec à Montréal (UQÀM) where he is studying the effects of forest management on the seasonal movements of forest-dwelling woodland caribou (*Rangifer tarandus caribou*). He also happens to play a mean banjo.

Jacynthe Guimond (jacegui@yahoo.ca) studied environmental sciences at McGill University. Prior to 2005, she worked in Alaska on a three-year research project on the environmental impacts of oil and gas exploration on the tundra ecosystem. She also worked on a mangrove conservation project in Costa Rica. Since 2005, she has been an environmental and social consultant for Paul F. Wilkinson & Associates Inc. Her work involves research, fieldwork and project management for a variety of mandates relating to natural resource management and Aboriginal peoples in Northern Québec. Jacynthe grew up on a dairy farm in rural Quebec. She loves clogging, especially to the sound of a mean banjo.
